

DECEMBER 2018

MINOTTI INVESTS IN TECHNOLOGY

Minotti takes a first key step toward the new frontier of technology 4.0, as part of a project to automate its processes over the next five years.

The first project involved the installation of an automatic leather-cutting system in the Meda production facility, in keeping with the most advanced methods of the Industry 4.0 plan. The innovative system, driven by a latest-generation software management program, will allow the company to speed up the process, making the mapping and hide-cutting phases more fluid, while ensuring the utmost precision and improving the already high standards of quality and performance.

The new system is part of a broader modernization plan to which Minotti has committed considerable resources. The initiative gained momentum over the course of 2018, a significant year during which the company celebrated its 70th anniversary.

The plan includes a series of strategic choices tailored to ensure the utmost in quality, efficiency and value throughout the entire production chain.
